

1. 拷贝解压

将压缩包拷贝到主目录并解压，进入解压文件夹并在其中打开终端

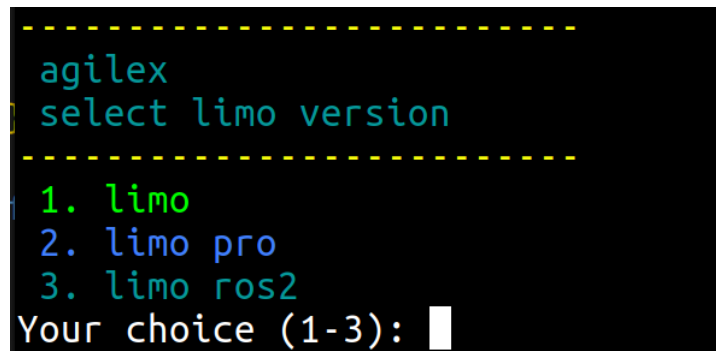

2. 运行脚本

```
./install.sh
```

A terminal window with a dark background. The title bar shows 'agilex@lagrange: ~/limo_dabai'. The prompt is 'agilex@lagrange:~/limo_dabai\$' and the command being executed is './install.sh'. A cursor is visible at the end of the command line.

```
agilex@lagrange: ~/limo_dabai
agilex@lagrange:~/limo_dabai$ ./install.sh
```

运行后出现选项：

A terminal window showing a menu. It has dashed yellow lines at the top and bottom. The text inside is 'agilex', 'select limo version', a list of options '1. limo', '2. limo pro', '3. limo ros2', and a prompt 'Your choice (1-3):' followed by a cursor.

```
-----
agilex
select limo version
-----
1. limo
2. limo pro
3. limo ros2
Your choice (1-3):
```

根据车型号输入数字并按回车，脚本开始自动运行，例如limo ros2 上输入“3”并回车

如果需要输入密码，输入agx并确认

如果出现错误，可以尝试再运行一次

3. 验证

limo:

新建终端

```
roslaunch astra_camera dabai_u3.launch
```

limo pro:

新建终端，输入1，回车

```
roslaunch astra_camera dabai_u3.launch
```

新建终端，输入2，回车

```
ros2 launch astra_camera dabai.launch.py
```

limo ros2:

新建终端

```
ros2 launch astra_camera dabai.launch.py
```
